

Knowledge Transfer Dossier

KT Handover - Aarav Singh

Prepared for **Aarav Singh**, **Senior Backend Engineer** in **Platform Engineering**. This document presents the recorded knowledge-transfer discussion as a clean, review-ready handover pack for operational continuity.

Employee ID	EMP-230	Employee Name	Aarav Singh
Department	Platform Engineering	Role	Senior Backend Engineer
Manager	Meera Kapoor	HR Contact	Nisha Verma
Resignation Date	2026-05-01	Last Working Day	2026-05-30

Executive Summary

The meeting agent converted the recorded KT discussion into structured, professional meeting notes covering role responsibilities, workflows, systems, operational dependencies, and transition actions.

Document Status	Awaiting Review
Meeting Capture	Structured meeting notes converted into formal KT documentation
Distribution	Employee, manager, and HR review copy

Key Responsibilities

- Own backend service reliability and production releases
- Review critical incidents and coordinate escalations
- Maintain deployment and rollback readiness

Daily Workflows

- Validate release checklist before each deployment
- Monitor live alerts and dashboards every morning
- Coordinate issue response with platform and product stakeholders

Systems And Tools

- Grafana

- Azure Portal
- GitHub Actions
- Jira Service Desk
- Production API Dashboard
- Incident Tracker

Project Insights

- Upcoming API migration requires close coordination with QA and DevOps
- Legacy alert thresholds need calibration after the next release

Open Tasks And Pending Actions

- Complete API migration checklist
- Transfer release ownership to new engineer

Risks And Dependencies

- Rollback procedure knowledge is concentrated with the outgoing employee
- Third-party integration timings can delay production fixes

Handover Checklist

- Confirm all critical documents have been uploaded
- Validate access handover ownership
- Review pending deliverables and escalation paths
- Share final KT document with employee, manager, and HR

Interview Highlights

What is the most critical daily responsibility?

Review production health, alert trends, failed jobs, and open incidents before the team stand-up.

What should the successor learn first?

They should first understand the deployment pipeline, rollback path, and incident escalation matrix.

Reviewer Guidance

Review the document for completeness, clarity of operational ownership, and readiness for business continuity.
